## About BodyNet

BodyNet is the first complete, web based system to manage vehicle repair bodyshops. Accessible from anywhere there is an internet connection, BodyNet includes all the functionality to operate an efficient bodyshop business. Covering three modules, BodyNet consists of the following areas;

- Bodyshop Management
- Shopfloor Data Collection
- Vehicle Repair Tracking

*BodyNet is provided as a service, and is by subscription only. Our development team ensure each of the modules offered are regularly enhanced to ensure that using the latest technology is supported by the latest product designs and functionality. Any enhancement to our modules are included with the subscription and implemented without any customer interaction*

## Features

Like any traditional Bodyshop management system, BodyNet provides the standard modules and features to assist the Bodyshop to operate efficiently and productively. These would include Estimating, Job Production and Control Management, Staff Management, Courtesy Cars and Invoicing. Additional modules Bodynet provide include;

- CSI feedback to measure the quality of repair and customer interaction
- On line bar code procedures for efficient staff and job tracking
- Customer contact points, including SMS and email
- KPI reporting and benchmarks to measure performance
- Connectivity and Integration with other estimating systems, accounting solutions, and data collection systems
- Work provider interaction that is estimate system independent
- Forecast and budget analysis tools

## Benefits

Using a bodyshop management system is fundamental to operating an efficient Bodyshop. Taking away manual processes and having information available real time is an underlying factor in being able to improve Bodyshop performance levels in all areas. Where BodyNet offers unique benefits, is not only in the module's themselves, but in the technology we use to deliver them;

### Accessibility

Having key information available easily and quickly is paramount. BodyNet is NOT an installation required solution and is accessible from anywhere that has an internet connection. Whether it is a laptop, desktop, Ipad, or your web enabled mobile phone, the complete BodyNet system is available for access and control.

### Subscriptions

BodyNet is offered as a service and requires no upfront costs, no additional fees, and no long term commitment. Not only is this financially beneficial to our clients, but this also means we are committed to constantly improving what we offer, to ensure your commitment to our solutions.

### Connectivity

Using the technology of the internet, having multiple or groups of Bodyshops using BodyNet is very simple. There are no networks required, and no connectivity needed between Bodyshops. All the information is consolidated in BodyNet and is provided real time.

### Information

With work providers demanding more and more, BodyNet can make this demand much simpler by providing access to key information simply and easily. Cycle Time and repair updates are automated and provided real time, based on access provided by the Bodyshop.

### Simplicity

A bodyshop management system requires input and commitment from its end user. BodyNet tries to make this a simple as possible by providing a solution that is straightforward and a solution where the benefit is realised quickly by all bodyshop staff. This ensures the commitment needed to be able to get the most from our bodyshop management system.

## Implementation

Benefitting from BodyNet is a quick and simple procedure. All we require is a good internet connection. As we do not require networks, servers or any other specific hardware, once training has been completed (remotely, or on-site), our clients are very quickly realising the assistance that BodyNet brings to their daily operation.
